## Our ENERGY STAR® qualified homes look even better when you get your utility bills.

**Look for these important energy efficiency features that can save you thousands of dollars over the life of your home.**

- The government-backed ENERGY STAR label identifies homes that are truly energy efficient.
- Sized, sealed, and insulated ducts increase HVAC system efficiency by as much as 20%.
- Tight construction improves comfort and indoor air quality.
- Properly installed insulation increases comfort and lowers utility bills.
- Independent testing and inspection ensures energy-efficient home performance.

To earn the government's ENERGY STAR, a home must meet strict energy efficiency guidelines set by the U.S. EPA. ENERGY STAR qualified homes are quieter and more comfortable, have lower utility bills, and help protect the environment by reducing greenhouse gas emissions.
